PARKING PERMIT SYSTEM

MANAGING

Permit Operations

at your fingertips

Faced with a growing demand, organizations and agencies need to enhance and simplify their system for parking permit management and the sharing of permit information with the by-law enforcement departments. The solution has to be seamless, responsive and convenient - without increases to administrative costs. EZTag offers a flexible and robust permit management system. Our Parking Permit System (PPS) will not only accommodate the projected growth in demand, it also offers additional features and services - without requiring one to increase permit fees..

PARKING PERMIT SYSTEM

Increasing Service without Increasing Costs

A significant challenge exists in both the managing of parking permit orders and the processing of their inevitable counterpart, citations.

PPS is a logical choice for a seamless computer system that can process permit purchases by sharing permit information with by-law enforcement departments via rugged handheld computers and wireless communications.

PPS is Microsoft Windows NT based and requires a minimal workstation configured with client. The system includes many management reports and additional reports can be developed and customized by the client.

The actual permits can be either preprinted forms or printed completely using standard office laser printers. Some clients choose to use preprinted forms whereby the Parking Permit System will add permit owner specific information and a bar code (if required for scanning permit numbers) using standard office laser printers.

Convenience, Cost-Savings and Room to Grow

PPS is interactive and user-friendly, provides many functions and services and offers a viable alternative to older or manually operated systems. Instead of wading through stacks of hand written color -coded permits, a client can now search on a single screen and find the entire account or permit purchasing history. This is simpler and more efficient than working through the layered options of a manual system.

Most importantly, permit information can be automatically downloaded daily to the enforcement department's hand held computers for the use of their officers when enforcing permit infractions. This extra convenience allows enforcement staff to verify the validity of permits by scanning the bar code using an integrated scanner on the hand held computers. This validation is crucial in identifying counterfeit permits that are easily replicated using today's imaging technologies that are readily available to the public .

Looking to the future, agencies and institutions can offer a wider range of services to their residents or staff such as permit purchasing via the Internet, as well as automated payments using the online PPS. Thanks to EZTag's PPS, parking facilities can continue to grow and offer new features to meet the evolving needs of the population at large - without increasing the costs of permit purchases.

Benefits

EZTag's solution is convenient, easy to use, and cost-effective. It provides clients with easier access and more options, without any increase in administrative costs. It also allows enforcement officers to validate permits.

Premier Provider of Citation Enforcement Solutions

EZTag is a mobile automation software development company, enabling business critical tasks to be performed on handheld devices to enhance public safety, improve user productivity and reduce operating expenses. Our enforcement solutions are built around three fundamental elements: innovation, cost-effectiveness and reliability. With over a decade of experience in the design and implementation of mobile solutions, EZTag has and continues to help its customers implement solutions that deliver business value throughout their organization. Business and Government, local and national, have relied on EZTag to help meet their enforcement needs as they adapt to the mobile computing world, contact us to see how the integration of emerging technologies can enhance the first line services your organization provides.
